

# HAWE

## HAWE Dual Tank System for field transfer trailers

From now on, HAWE Wester is offering a dual tank system for their transfer trailers of the ULW 2500 to ULW 4000 series for filling drills with seeds and fertiliser. The usual functions of the transfer trailer during harvest remain entirely untouched by this system, so that the full performance is still available here.

## ULW WITH DUAL TANK

TRANSPORTED BY PASSION

# Seeding and mineral fertilisation in a single work step

The tank volume of the transfer trailers from HAWE Wester can now be split longitudinally at the ratio of 60 / 40. The separator system of the transfer trailer tank can be fitted easily and also removed again.

Under each of the hoppers there is a hydraulically driven auger. The filling of the seed drills is remotely radio controlled from the comfort of the tractor cab.

In combination with the optional HAWE load-weighing system, the driver doses the exact amount of fertiliser and seeds as necessary for the plot and this considerably reduces the residual amounts. The usual functions of the field transfer trailers remain entirely untouched by this system, so that there are no functional restrictions during grain harvest.

## Scope of delivery dual tank system

ULW 2500 / 3000	ULW 3500 / 4000
Separator system in the hopper 60 / 40 removable	Separator system in the hopper 60 / 40 removable
Hydraulic drive of the floor augers	Hydraulic drive of the floor augers
Electro-magnetic valve block for remote radio control, CCLS-load sensing hydraulic system	Electro-magnetic valve block for remote radio control, CCLS-load sensing hydraulic system
Remote control of the floor augers	Remote control of the floor augers
Remote control of the position of the seed auger	Remote control of the position of the seed slide folding
